Pratt & Whitney Commits to a Multi-Year Enterprise License for Integrated Management Concept's (IMC) Industry-Leading, Enterprise-Grade Cloud-Based EVM Platform

WebEVM ensures EIA-748 compliance for top Aerospace and Defense (DoD) Companies and DOE Labs

AUSTIN, Texas, 1/6/25 – IMC, the leader in Earned Value Management (EVM) software for government contractors, announced a far-reaching expansion of enterprise licenses for one of its major DoD customers, Pratt & Whitney, enabling the defense and aerospace prime contractor to replace legacy software, significantly reduce data processing cycles and project support costs throughout their organization.

"What started as a modest six-month trial with Pratt & Whitney two years ago has now become an integral part of their operations, showcasing their preference for our superior enterprise-grade technology," stated Mark Tillema, CEO and co-founder of IMC, creator of WebEVM. "WebEVM stands unrivaled in the market for $100M+ government contracts. It has demonstrated its capability across hundreds of projects, effectively assessing project health and forecasting future outcomes."

US government contracts valued over $100M must comply with the EIA-748 standard, which requires ongoing assessment of performance and project status involving large and complex data structures spread over disparate systems. IMC's cloud-based platform, WebEVM, solves project management compliance with automated data ingestion and validation, key third-party integrations and tracking. This ensures that multibillion-dollar government projects stay on track, within scope and are delivered within budget and on time.

"After Pratt & Whitney confirmed that our software fit with their requirements, they replaced their core EVM software as well as seven other legacy platforms," Tillema continued. "The result is improved functionality for the Cost Account Mangers (CAMs) as well as data quality for informed decision making."

Other WebEVM advantages contributed to Pratt & Whtiney's commitment for an enterprise license, including:

- Seamless accounting and project management software integration
- Speed—the platform rates and summarizes enterprise data in minutes
- Automation of any WebEVM functionality
- Change management and Estimate at Complete (EAC) management

About Integrated Management Concepts, Inc. (IMC)

IMC is headquartered in Austin, Texas and founded in 1995. Through its software unit, DecisionEdge, IMC has been successfully developing and deploying WebEVM since 2010 as a modern, cloud-based platform offering a full suite of enterprise EVM functionality for EIA-748 compliant contractors, construction management and beyond.

About WebEVM

IMC's cloud-based WebEVM is the only platform on the market that can analyze project health and predict future performance for $100M+ government contracts. Proven at scale with a growing list of major enterprise customers, the technology easily converts external data into a complete dataset for earned value professionals through seamless, open integration of preexisting accounting and project management software. Fast deployment in a secure private cloud, enterprise or hybrid environment reduces cost and allows faster and easier compliance with EVM requirements.

It can integrate, compute and summarize a 20,000-activity, resource-loaded schedule in minutes and provide seamless connectivity to external systems. An intuitive user experience dramatically shortens product adoption time, and web infrastructure allows easier deployment and updates across the entire enterprise.
